TRANSPORT PHOTOGRAPHY

Transportation photography showcases the journey of man's fascination with movement and mechanics. Whether the invention of the wheel or engines, moving across land, sea, air or space, we are inspired to keep riding along this visual virtual highway.

Images of trains, buses, aircraft, tuk-tuks, cycles, ships and cars all make good poster and calendar material. For us this is all about the subject matter, we can provide whatever is needed with an added twist, the smoke of an exhaust, or the blur of movement. In the above shot of a D6700 locomotive at York railway museum, we have emphasized the enormity of the engine by using a short focal length lens, on other occasions a telescopic lens is necessary such as an aircraft in flight, there is a wide variation in photographic techniques and so it's best to be prepared and take the right equipment to the shoot. For this type of work, forward planning is essential.

Tell us your requirements and we shall not only listen carefully and meet them but we shall also add style.

ABOUT TEESSIDE PHOTOGRAPHY
